# STUDENT REPORT

# **DETAILS**

### Name

VIDYA N H

### **EXPERIMENT**

### Title

ANT ON RAIL

# Description

There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it gets exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.

Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left . Your task is to find and return the integer value representing how many times the ant reaches back to original starting position.

#### Note:

- Assume 1-based indexing
- Assume that the railing extends infinitely on the either sides

# Input Format:

**input1**: An integer value N representing the number of moves made by the ant.

input2 : An integer array A consisting of the ant's moves towards either side

### Sample Input

5

1-11-11

#### **Sample Output**

2

# RESULT

5 / 5 Test Cases Passed | 100 %
